PROFESSIONAL EXPERIENCE

Hexaware Technologies

Business Analyst

Bangalore, Chennai
Jan 2022—Present

- Have been involved in Airline relevant fields as a Technical Business Analyst for 4.5 years.
- Experienced in PSS API integration between different Stakeholders such as NDC and AC.com.
- Experienced in Shopping and Booking EIP Integration with Amadeus 1A System.
- Collaborated with business stakeholders and clients to gather requirements, and documented them in business requirement documents.
- Identified integration requirements and customer-specific considerations to ensure seamless system connectivity.
- Managed new requirements and change requests, effectively updating and documenting design changes in Confluence and IMD.
- Conducting grooming / walk through sessions to scrumteam once design is finalized for user stories.
- Collaborated with the development team to support design and requirement walk throughs, and user documentation. Reviewed and conducted unit tests before deployment to QA environments.
- Documented current vs. future state integration models including API-based, event-driven, and partner-supported architectures.

- Collaborated with engineering teams to address edge cases, exceptions, and integration challenges effectively.
- Collaborated with the QA team to provide test design and execution reviews related to the functionalities being tested.
- Worked seamlessly with JSON and XML requests, assisting the development and QA teams with complex request preparations
- Troubleshoot failure requests and transactions using the Mulesoft Anypoint platform, analyzing and identifying breakages and root causes for failures.
- Collaborated with business owners, SME's, system architects, and senior developers during JAD sessions to gather business requirements and facilitate/scribe requirements understanding .
- Conducted functional and regression tests after each module development to ensure existing functionalities were not hindered and requirements were met.
- Participated in triage calls to review, discuss, and prioritize bugs based on their severity.
- Participated in sprint planning meetings to discuss and prioritize user stories and bugs for upcoming sprints based on their impact on project objectives.
- Participated in release-oriented stand-up calls with the application QA/UAT testing team to discuss observations found during the INT/UAT testing phase.
- Supported production deployment calls to resolve issues observed during post-production deployment health checks, ensuring immediate resolution.
- Prepared release notes following successful production deployments .
- Participated in monthly automation test case addition calls with the QA team to review all functionalities and minimize leakages.
